WORK EXPERIENCE

MEDIA.NET | UI DEVELOPER (L1)

Mumbai, IN | October 2021 – Present

- Crafted a dynamic web application leveraging **React, TailwindCSS, Axios and React Hook Form** facilitating users in accessing exclusive deals on both new and pre-owned vehicles. Engineered a versatile server-driven UI component for Forms, ensuring seamless interaction and streamlined user experience.
- Created a bespoke **JSON Files Editor** as a **WordPress Plugin**, enabling business developers to seamlessly execute **CRUD** operations on JSON files hosted on the server directly from the WordPress Admin Panel. Implemented necessary role checks to ensure restricted access to the Admin Panel. This innovative plugin effectively eradicated the manual task of developers updating static JSON files on the server.
- I played a significant role in crafting **WordPress themes** for Forbes Advisor. This encompassed developing bespoke shortcodes, advanced custom fields, and reusable UI elements like accordions, modals, forms etc., using **HTML, CSS, Javascript, VueJS, jQuery, TailwindCSS**
- Setup a CI/CD pipeline and exceeded requirements in each stage, which led to the application being pushed to production. Some of these applications are [PurePlay](#), [TrustedStack](#), and [Advertising.tech](#)
- Managed and enhanced corporate websites, overseeing all maintenance and development activities.

PROJECTS

VUE-SALISATION

VUE.JS, TAILWINDCSS, AMCHARTS AND AXIOS

Designed and developed an interactive **dashboard** displaying real-time COVID-19 statistics across India. The dashboard features dynamic graphs for visualizing COVID-19 data and an interactive map of India highlighting statistics for each state. Deployed on **Netlify**

EKLAVYA: AN AUTOMATED QUIZ GENERATION APP

VUE.JS, TAILWINDCSS, NODE.JS, GRAPHQL AND TENSORFLOW POSE DETECTION

Designed and developed a web app that enables teachers and professors to generate and host quizzes for students.

- Quizzes can be generated by providing an image of questions and answers and our OCR can detect the same and convert it to editable Form like Google Forms.
- Teachers can host quizzes and view real-time video feeds of students currently participating in the quiz. We implemented this feature using **GraphQL**.
- We added proctoring feature to detect if quiz participants are looking away from screen too often use **TensorFlow pose detection**

HANDSFREE.IO

HTML/CSS, JAVASCRIPT, AMCHARTS

This project was a product website aimed at showcasing the uses of a hands-free device designed for individuals with disabilities. The device enables users to control mouse movement through eye movement. The website includes a demo page where users can test the product themselves.

PERSONAL WEBSITE

NEXT.JS AND TAILWINDCSS

A personal portfolio website

SKILLS

React, JavaScript, HTML/CSS, Next.js, PHP, WordPress, jQuery, Vue.js
